Addendum No. 1

Request for Proposals for Upper Big Creek Flood Hazard Mapping

All issued addenda will form part of the RFP. Receipt and acknowledgement of all issued addenda shall be included in the submitted proposal.

Answers to questions submitted regarding the RFP document:

Q1. Can the Long Point Region Conservation Authority consider a postponement for the submission deadline?

A1. No, the due date for proposal submissions remains March 17, 2026, at 3:00 p.m.

Q2. Would it be possible to have a copy of the existing erosion hazard mapped by LPRCA to be integrated with the flood hazard lines developed as part of this project?

A2. Yes. The shape files for the various components of the erosion hazard have now been included in the Erosion Hazards folder that can be accessed through the attachments link in the RFP document.

Q3. Is there any reporting and/or mapping that can be shared from recent LPRCA hazard mapping efforts? Understanding that the Nanticoke Creek project is not yet complete.

A3. Yes. Flood hazard maps from the 2020 Wood study for various locations across the watershed and the 2025 Aquafor Beech Big Otter Final Hydraulics Modelling report and maps are available on the LPRCA website at the following link: [Policies & Guidelines - Long Point Region Conservation Authority](#). Please note that both of these projects predate the current FHIMP technical requirements and the recent provincial guidance that are indicated in the RFP.
